NETFLIX CUSTOMER CHURN ANALYSIS

Insights from netflix_customer_churn.csv

2026-09-29

50.3% Customer Churn Rate

Average viewing time: 11.65 hours | Average days since last login: 30.09 days | Average monthly fee: 13.68 zł | Most common payment method: Debit Card

Churn Rate Variation by Region

Regional churn rates show notable differences across geographies. Some regions exhibit significantly higher churn, suggesting localized dissatisfaction or competitive pressure from alternative streaming services.

Retention patterns vary by region, indicating that a one-size-fits-all approach may be insufficient. Targeted regional strategies — such as localized content or pricing adjustments — could help reduce churn in high-risk areas.

The overall churn rate stands at 50.3%, but regional breakdowns reveal clusters of both loyal and at-risk customers. Understanding these geographic segments is key to prioritizing retention investments effectively.

Average Usage by Device Type

Watch Hours

Devices such as Smart TVs and laptops tend to show higher average watch hours overall, suggesting longer, more immersive viewing sessions on larger screens.

Watch Time Per Day

Mobile and tablet users show distinct daily watch time patterns. Understanding these differences helps identify which devices drive deeper engagement and loyalty.

Viewing Hours Distribution Insights

The distribution of watch_hours reveals a broad spread of viewing behavior across customers. The average viewing time is 11.65 hours, with notable clusters at both low and high ends, suggesting distinct viewer segments — from casual to highly engaged users. Outliers at the upper range may indicate binge-watching patterns worth exploring for retention strategies.

Payment Methods & Descriptives

Netflix Customer Churn Analysis

Summary & Next Steps

Churn rate at 50.3% remains a critical challenge. Regional differences suggest targeted retention strategies, while device usage and viewing patterns can inform personalized engagement approaches.

Payment method insights may influence billing strategies. Open questions remain on churn drivers, customer segmentation, and the impact of login frequency (avg. 30.09 days) on retention.

LET'S KEEP ANALYZING!

Open questions remain: What drives churn beyond the 50.3% rate? How does login frequency impact retention? Can customer segmentation reveal deeper behavioral patterns? We invite your proposals and further discussion.
